Experience

Wissen Technology (Client: Morgan Stanley) *Apr 2026 – Present*

Software Engineer II India

- Built **tenant-isolated workflow orchestration** for an AI-assisted developer platform adopted by 6 engineering teams, saving **120+ hrs/week** in manual handoffs. (**FastAPI, Claude, LangGraph, LangChain**)
- Built a configurable **Snowflake Cortex** semantic query layer enabling business users to query production data in plain English, reducing ad-hoc data requests by **50%** and cutting automated RCA incident triage time by ~**40%**. (**Flask, Spring Boot, React**)
- Migrated legacy file-based issuance/retirement feeds to **Airflow ETL** with SCD history, achieving a **45%** storage reduction and enabling daily reporting versus weekly batch files. (**Spring Boot, Python**)

SDE - I *Jun 2025 – Mar 2026*

- Cut **compute costs by 60%** (~$15k/mo) by migrating legacy treasury workflows to **distributed Airflow (Celery)** with automated failovers and SLA monitoring.
- Reduced **reporting SLAs by 40%** (5→3 hrs) by architecting **Spring Boot microservices** with **Snowflake** ingestion and validation pipelines.
- Productionized an **AI-assisted P&L anomaly platform** combining statistical deviation detection with **HITL** investigation workflows, reducing manual verification cycles by **60%** across all daily trading batches.

SDE Intern *Feb 2024 – May 2025*

- Saved **200+ hrs/week** by building an **ICAAP automation platform** (Spring Boot, Angular), and optimized **Apache Spark ETL** pipelines to cut runtime by **20%** and reduce quarterly incidents to zero (**12→0**).
- Scaled services to handle **70% higher peak traffic** (2K req/sec) using **Hazelcast distributed caching**, maintaining cross-node consistency and sub-100 ms latency.

Projects

View all projects

PnLGuard AI — Financial Anomaly Monitoring System *Jan 2026*

Spring Boot, PostgreSQL, React, TypeScript Live

- Built a **financial anomaly monitoring platform** combining rule-based P&L detection, AI-assisted RCA, and analyst sign-off workflows with **audit trails**.

ChatLoom — Multi-Tenant RAG Platform *Mar 2025*

Spring Boot, PGVector, Docker, LLM Load Balancing Live

- Built a **multi-tenant RAG platform** with automated vector-store provisioning and **tenant-isolated retrieval pipelines** for one-click onboarding.

Skills

- **Languages & Frameworks:** Java, Python, SQL, TypeScript, Spring Boot, FastAPI, Flask, React
- **Distributed & DevOps:** Microservices, Redis, Hazelcast, Idempotency Patterns, Docker, GitHub Actions
- **Data & AI Infrastructure:** Apache Spark, Airflow, Snowflake (Cortex), PostgreSQL, PGVector, LangGraph, LangChain, Claude, Agent Workflows, RAG

Education & Certifications

Lovely Professional University *Aug 2021 – May 2025*

B.Tech in Computer Science and Engineering Punjab, India

- **Certifications:** Claude Code in Action (*Anthropic*) · Data Streaming Engineer Foundations (*Confluent*)
